

WEB 114 Information

FREE Software *(Same as WEB 110 HTML & CSS)*

You will need both a **code editor** to write your HTML and CSS and a GitHub account to upload/publish your completed files to the JCCC web server. See my recommendations below.

1. **Free code editors:** (We have each of these in our JCCC labs. Pick one or use your own favorite)
 - **Microsoft Visual Studio Code:** <https://code.visualstudio.com/> (Windows OR Mac)
 - **Brackets:** <http://brackets.io/> (Windows OR Mac)

2. GitHub– (web based program)

<https://github.com>

Side note: Make sure you know how to upload folders and files. You will need to create a new folder for each chapter to keep your homework submissions organized.

TO SUBMIT A PROJECT...

Graded homework is due every week. To complete the projects successfully....

1. Complete the project exactly as instructed in the textbook.
2. Use the file and folder names specified in the textbook.
3. Make sure your name and the current date is added as a comment to the top of the file.
4. For html files, the comment goes as the second line.

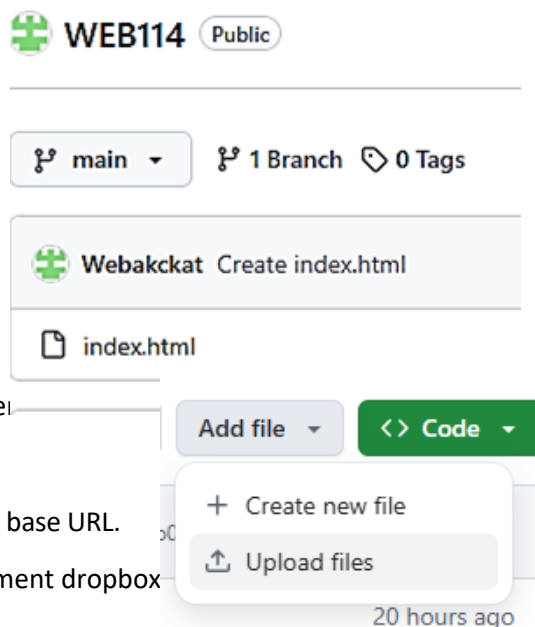

```
1 <!DOCTYPE html>
2 <!--Allison Hanna Project 2 1/10/23-->
```

5. For CSS files, the comment goes as the first line.

`/* Your Name - current date */`

6. Spellcheck content. Validate all files.
 - o html: <https://validator.w3.org/>
 - o CSS: <https://jigsaw.w3.org/css-validator/>

7. Connect to GitHub.
8. Open your repository (container).
9. Click Add files > Upload files.
10. Upload the files for that project to the new folder.
11. Click Code > Deployments to see your base URL.
12. Add the folders and file names to the end of the base URL.
13. Copy the URL and paste into the Canvas assignment dropbox

All projects we do this semester will start with:

https: [username].github.io (where “youruserid” is replaced by your GitHub username)

Submitting the URL is very important.

Here’s why:

- I can’t the work you do on your computer. For me to grade it, it must be on the Internet.
- It’s an official record of what work you’ve submitted and when you’ve submitted it.
- It’s an organized way for us both to keep track of the grades and feedback for each project.

Side note 1: We must publish our pages to a Web server so that we can view them using ANY computer with a browser connected to the Internet!

Side note 2: A Web developer “best practice” is to name all Web folders and files using **lowercase** without spaces.
